

Directions: Listed below are the basic parts of a model glider. These are also the basic parts of a real life glider. Conduct some research and find out what these parts are and how they are vital to the function of the glider. The last two items in the table below are general terms for our Intro to Aeronautics unit. Find the definitions for these on [Intro to Aeronautics-Gliders](#) webpage and record below. On the back, label the 5 parts in the boxes that are pointing to that part. There are two pictures of a simple glider, one assembled and one not. Each box is pointing to the same part in both images.

Glider Parts/Terms	Definition/Description
Wing	
Fuselage	
Ballast Weight	
Tail/Rudder	
Elevator
